probabilistic modeling of flexible pavements - probabilistic modeling of flexible pavements ... assessment of a pavement section is obtained by considering the shook and finn design equation as a function of two random variables-the expected number of traffic loads and the califor nia bearing ratio (cbr) of the subgrade soil. the formulation is a second-order, second-moment development of this equation. it requires knowledge of only the ... **numerical modeling of flexible pavement constructed on ...** - the finite element method was used to analyze the flexible pavement section resting on dry and saturated expansive sub-grade soil
